

Set up your phone (one time)

Do this once on your phone. Allow about five minutes.

Leave the computer square open.

Scan your own account's code when you practice.

Same steps on Android

Your checklist

- 1 Get Google Authenticator from the App Store or Google Play. Allow the camera if asked.
- 2 On your computer, sign in with your email and password. Leave Secure your account open.
- 3 Open the phone app. Tap +, then Scan a QR code. Point the phone at the square on your computer.
- 4 Type the six phone numbers on the computer. The page checks them automatically. Wait for new numbers if the circle is almost empty.
- 5 Click Print. Keep your spare keys safe at home. Tick I have printed or saved my spare keys. Click Continue to my workspace.

Never share your password, phone codes, or spare keys. Your phone works without the internet.
